DOMAIN

Domain itself can play a role in the effectiveness of your marketing.

The address of a website that users enter into their browser's URL bar to access is known as a domain, or domain name. It's a crucial component of building a website for your company because, in contrast to the IP address of the website, it acts as a short, easily remembered name for users and browsers.

A domain name is a text string that may be accessed via client software to access a website. It maps to an alphanumeric IP address. A domain name is, to put it simply, the text that a user enters into a browser window to go to a specific website.

WEB HOSTING

Hosting, Web site hosting, Web hosting, and Webhosting is the business of housing, serving, and maintaining files for one or more Web sites. More important than the computer space that is provided for Web site files is the fast connection to the Internet. Most hosting services offer connections on T-carrier system lines. Typically, an individual business hosting its own site would require a similar connection and it would be expensive. Using a hosting service lets many companies share the cost of a fast Internet connection for serving files. number of hosting companies describe their services as virtual hosting.

TYPES OF WEB HOSTING

LINUX HOSTING

Linux web hosting is everywhere. Whether you're looking for a simple shared website hosting account or a powerful dedicated server, the chances are that you'll be offered a Linux-based option first.

WINDOW HOSTING

VPS hosting is actually possible and Disha Infotech has proved that. Now, for the price of shared web hosting you can have your own, personal cloud server and no longer share your web hosting space with anyone else.

VPS HOSTING

Windows hosting is website hosting that uses a Windows operating system. Because the most common web hosting plan options operate on Linux, you can usually assume that anytime a web hosting company doesn't specify a plan is Windows hosting.

DEDICATED HOSTING

Dedicated server means that you get an entire server to yourself. There's no sharing of CPU time, RAM or bandwidth, which means your website stays responsive at all times. Dedicated hosting implies that you also get far more control over how the server is configured.

E-MAIL SERVICES

Email, sometimes referred to as electronic mail, is a way to send and receive communications using electronic devices. as the mail's equivalent or digital form. Email is a very common and frequently used communication tool. In most nations today, having email address is considered a minimum requirement for many procedures in business, trade, government, education, and other everyday life areas.

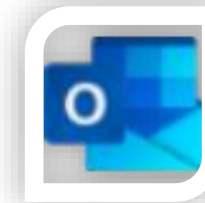

TYPES OF WEB HOSTING

GMAIL

It lets you take notes, organize contacts, send and receive emails, and manage your calendar. You can use any web browser or third-party programs that support POP and IMAP protocols to access your Gmail account. Every Gmail account has the domain .com. Each Google account comes with 15GB of free storage that can be used for Gmail, Drive, and Photos.

MS OUTLOOK

VPS hosting is actually possible and Disha Infotech has proved that. Now, for the price of shared web hosting you can have your own, personal cloud server and no longer share your web hosting space with anyone else.

GO DADDY

The core functions of GoDaddy include email hosting, web hosting, website development, and domain name registration. In addition to these essential services, GoDaddy provides online marketing tools including email marketing, social media management, and SEO.

ZOHO HOSTING

Customer relationship management (CRM), email, accounting, project management, and other areas are all covered by Zoho, a full suite of online software programs for enterprises.

SMS SERVICES

Hosting, Web site hosting, Web hosting, and Webhosting is the business of housing, serving, and maintaining files for one or more Web sites. More important than the computer space that is provided for Web site files is the fast connection to the Internet. Most hosting services offer connections on T-carrier system lines. Typically, an individual business hosting its own site would require a similar connection and it would be expensive. Using a hosting service lets many companies share the cost of a fast Internet connection for serving files. number of hosting companies describe their services as virtual hosting.

WHATSAPP SERVICES

WhatsApp is a free cross-platform messaging service. It lets users of iPhone and Android smartphones and Mac and Windows PC call and exchange text, photo, audio and video messages with others across the globe for free, regardless of the recipient's device. WhatsApp uses a Wi-Fi connection to communicate cross-platform, unlike Apple iMessage and Messages by Google, which require cellular networks and Short Message Service (SMS).. WhatsApp can be downloaded on any smartphone with a SIM card, internet connection and phone number. Once set up on a smartphone, a WhatsApp user can link their account to a desktop version of the app on a tablet or computer. WhatsApp works like other Wi-Fi-exclusive messaging services, such as Facebook Messenger, which is accessible to both phones and computers. However, instead of requiring an account with a username and password, WhatsApp identifies users by their phone number.

WHATSAPP API SERVICE

Businesses can communicate with their clients on WhatsApp by sending and receiving messages via the WhatsApp Business API, which provides a programmable interface. It is intended for medium-sized and larger companies that have a lot of mails to handle. You may send and receive messages, build chatbots, and incorporate WhatsApp messaging into your company processes with the help of the WhatsApp company API.

You must apply for access to the WhatsApp Business API and have it approved by WhatsApp before you can use it. After approval, you can integrate messaging functionality into your business apps via the API. Your messages are safe and confidential since the WhatsApp Business API follows the same encryption and security procedures as the WhatsApp Messenger client.
